

ABSTRACT OF THE DISCLOSURE

There is provided a switch 10 for connecting a first terminal with a second terminal electrically. The switch 10 includes: the
5 first terminal 46; the second terminal 26 and a third terminal 28 confronting said first terminal 46; driving means 70 for driving the first terminal 46 in the direction of the second terminal 26 and the third terminal 28; and an electrostatic coupling section 72 including a first electrode 50 and a second electrode 30
10 confronting each other for attracting the first terminal 46 in the direction of the second terminal 26 and the third terminal 28 by electrostatic force.
